PRODUCTS FOR

## MASONRY FIREPLACES

from the Heart of the Craftsman...

# PRODUCTS FOR MASONRY FIREPLACES

**Masonry** fireplaces are one of the most enduring and desirable elements of the American home. A warm hearth draws the family together, evoking memories of days gone by when the fireplace was the heart of the home; the cooking center and the main source of heat. Today, masonry fireplaces take many forms, limited only by the skill and imagination of the mason and/or the architect. From neat brick fireplaces in the Colonial style ~ to dramatic soaring walls of stone ~ to modern glass blocks ~ and everything in-between, fireplaces define your home. Enhance the beauty and functionality of any fireplace design and increase safety and efficiency with the installation of a quality Stoll fireplace glass door. Let Stoll craftsmen make a door or screen to complement your fireplace perfectly.

**Beauty:** Stoll offers fireplace glass doors in a broad selection of styles and finishes to accent your fireplace and fit your decor. Designs range from simple to ornate; antique to modern. Select from a palette of colors and metal finishes in endless combinations. Optional Stoll decorative design elements add interest and dimension to personalize your door. Or, have our artisans incorporate a unique design of your own creation.

**Safety:** Stoll fireplace doors are fitted with high quality 1/4" tempered glass and safety screens. Tight fitting custom quality screens, mounted securely to the fireplace face, contain sparks much better than decorative screens. Our custom cabinet style screens are especially sturdy due to a "clamshell" design, with the tightly woven, heavy gauge wire mesh welded between two steel frames. The glass doors add an impenetrable barrier to sparks and heat loss once they are closed to contain a dying fire.

**Energy:** Properly designed fireplaces naturally draw air from the home to vent smoke. Even when the fire is not burning, warm room air, created at your expense by your heating system, escapes up the flue. Properly installed glass doors can reduce air flow through the fireplace opening up to 99%. Stoll also offers doors with gasket seals to prevent cold air infiltration down the flue in tightly insulated homes.

# ORIGINAL COLLECTION

Stoll's Original Collection is constructed with time-proven frame designs we have used for over 40 years. Glass doors are trackless, allowing them to fold back unobtrusively against the fireplace and make cleaning quick and easy. With our special construction techniques we can provide a quick turnaround on standard doors. Doors are available in Cabinet or Bifold style; fully framed, TotalView or ClearView. Choose from our selection of durable powder coat finishes, solid metal overlays, or any combination to accent and beautify your fireplace room.

**TRADITIONAL:** Constructed with a 14 gauge formed steel frame which can be made in any width or depth to match the scale of your fireplace. Design possibilities are endless with this custom frame construction.

**TOTALVIEW:** A distinctively modern style with frameless glass doors for a clean and simple look that ranges in design from dramatically contemporary to timelessly classic allowing a maximum view of the fire.

**FILIGREE:** Adds decorative filigree overlay to top and/or bottom of the Traditional frame.

**TRADITIONAL IRON:** The heavyweight, 10 gauge channel frame provide exceptional strength, depth, and texture; it's ruggedly handsome when finished in one of our scratch-resistant powder coat finishes.

# BAR IRON COLLECTION

**B**ar Iron construction allows for design and creativity not possible on our Original frames. The main frame profile is reduced to a trim 3/16" allowing the door to blend seamlessly with the fireplace, without sacrificing strength and durability. The bar iron material allows Stoll to take full advantage of Computer Aided Drawing (CAD) & the latest laser cutting technology. Custom tailored doors can be mounted inside the opening or overlapping the opening depending on your preference. They can also fit virtually any size or shape fireplace and incorporate special decorative elements into the main frame and/or door frames.

**INSET:** Door frames are recessed into the bar iron main frame using European style hinges to create a flush custom cabinet appearance.

**PLATED:** Main frames and/or door frames can be electroplated in the finish of your choice. The result is a seamless finish in brass, copper, or nickel with the low maintenance qualities and strength of steel.

**CUSTOM FRAME DESIGN:** The artisans at Stoll can incorporate intricate or custom designs with features like Integrated Grate Heater Vents or custom text and logos.

# BAR IRON ARCH COLLECTION

Stoll uses CAD and laser-cutting technology to allow for unlimited flexibility in frame design. Custom frames can be made to precisely match a template of any opening and are laser-cut from a single sheet of metal so strength and accuracy are ensured. Doors can be made to overlap the opening to disguise uneven masonry or mounted inside the opening for a flush custom appearance. All inside fit arch doors are prepped with a rigid template of the finished door to verify dimensions. Stoll mortar frames are the perfect accessory for new construction or exceptionally rough fireplace openings. See page 18 for more details.

**ARCH:** Arched fireplaces vary greatly in shape and design from cathedral to fully arched, and with Stoll's templating process glass doors can be made to accurately fit any opening.

**ARCH CONVERSION:** The rectangle main frame and arched door frames will create the illusion of an arched fireplace in a rectangular opening.

**SIDELIGHT & TRANSOM:** Glass-backed sidelights and transoms add additional detail and interest. They work especially well with large fireplace openings where the doors are reduced in size for ease of handling.

# CRAFTSMEN COLLECTION

The Craftsmen Collection of enclosures gives our artisans an opportunity to show their skill and creativity. The goal is to capture the charm and style of metal work created in the days of the blacksmith's forge while taking full advantage of the quality and precision produced by high-tech laser cutting machinery. Choose from a variety of hammered, distressed, and embellished designs to complement your hearth. Select our clear "natural" powder coat to enhance the rugged appeal of these doors. The result will be a beautiful fireplace that looks like it has been handed down through generations.

**FORGED IRON:** Each component is heated and hand forged to a unique hammered finish. This distressed iron texture gives your fireplace a rustic charm and warmth. Add strap hinges to create a colonial masterpiece.

**AGED IRON:** The aged iron effect is created with a two-step hand distressing process. As a result each door is unique in replicating the appearance of age and wear associated with years and years of use.

**BLACKSMITH:** This style adds special detail and ornamentation to your fireplace. Individual elements can be removed to suit your taste. The arched frame is specially designed to convert rectangular openings to the look of an arched fireplace in one step.

## OLD WORLD

This new creation from Stoll is a wonderful addition to a period home or rustic hearth. The design uses distressed metal and riveted corner brackets to replicate the look of metalwork crafted at the forge and anvil. Wider door frames work exceptionally well with Air Seal option.

# OUTDOOR COLLECTION

Outdoor rooms are very popular and a fireplace is often the key element in the design. However, these fireplaces present unique challenges because enclosures and screens must be weather resistant. Stoll uses premium stainless steel or extruded aluminum material to meet these challenges. These durable materials are also suitable for indoor fireplaces in coastal regions where salt air or damp conditions prevail. The unique modern design of stainless steel or molded aluminum have also found a home on the indoor hearth.

**STAINLESS STEEL:** Stainless steel enclosures are the ultimate outdoor fireplace furnishing. Solid 3/16" type 304 stainless steel frames, screens, and mounting hardware provide superior weather resistance. Enhance the beauty of Stainless Steel by selecting our clear "natural" powder coat.

**PREMIER EXTRUDED BAR:** Classic molded contours and mitered corners are at the heart of this design. The main frame and door frames are constructed of thick aluminum extrusions made to Stoll's specifications to create exceptional strength, durability, and weather resistance.

**HANGING MESH KIT:** Includes stainless steel header bar, 19 gauge stainless steel hanging mesh and wire pulls for safety without glass doors.

## STAINLESS REFACE

**OUTDOOR FIREPLACES CAN BE BUILT USING A MANUFACTURED FIREBOX AND A STAINLESS STEEL REFACE IS AN EXCELLENT CHOICE IN THIS APPLICATION.**

# ESSENTIALS COLLECTION

Stoll Essentials were designed to fill the needs of the home owner on a budget or those just looking for an excellent value. Doors and screens feature Stoll's heavyweight 14 gauge welded frames for strength and durability. Glass doors use high quality tempered glass to seal out drafts and retain valuable heat in the home. The Philadelphia and Trenton doors come in a variety of standard sizes to fit a wide range of rectangular fireplaces. Mesh doors provide superior protection from flying sparks when the benefits of glass doors are not needed and hearing a crackling fire is your preference.

**PHILADELPHIA:** FEATURES A 3" WIDE X 1" DEEP FRAME AVAILABLE IN 7 STANDARD SIZES TO COVER A WIDE RANGE OF OPENINGS. CHOOSE FROM THREE POWDER COAT FINISHES. SLOTTED DAMPER AND HANGING MESH ARE STANDARD.

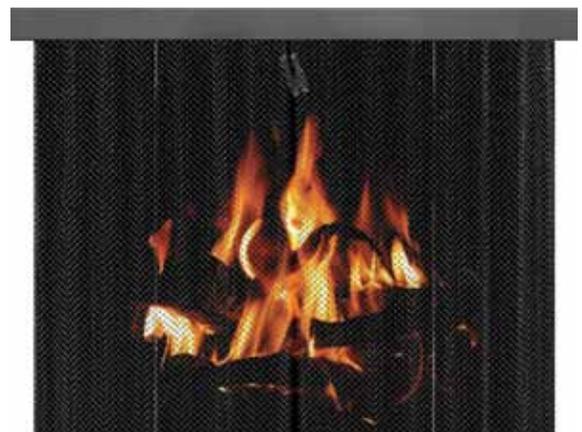

**TRENTON:** FEATURES A SLIMMER 5/8" FRAME DEPTH AND AVAILABLE IN 9 STANDARD SIZES. CHOOSE FROM SIX POWDER COAT FINISHES. HIDDEN DAMPER IS STANDARD. HANGING MESH & TRENTON FILIGREE ARE OPTIONAL.

**MESH:** HOMEOWNERS IN WARMER CLIMATES OFTEN PREFER A SCREEN FOR SPARK PROTECTION RATHER THAN GLASS DOORS. STOLL OFFERS A HANGING MESH KIT, A STANDARD MESH DOOR & A TRADITIONAL MESH DOOR.

## HANGING MESH KIT

An open fireplace brings back warm memories of holidays and family gatherings around the hearth. Stoll reintroduces the classic hanging mesh style for ember protection; an excellent choice to replace old, worn out mesh screens. The kit is made to size and comes complete with header bar, curtain rod and 19 gauge hanging mesh with wire pulls.

# TIPS & DEFINITIONS

## HOW TO USE GLASS ENCLOSURES

GLASS DOORS ARE DESIGNED TO BE OPENED WHEN YOUR FIREPLACE IS IN USE. STOLL'S PRODUCTS COME STANDARD WITH CABINET MESH AND SAFETY LATCH TO ELIMINATE FLYING SPARKS AND LOG ROLL-OUT. PYRO-CERAMIC GLASS MUST BE USED IN APPLICATIONS WHERE IT IS DESIRED THAT THE DOORS BE CLOSED WHILE BURNING.

## HAND-FORGED FINISHES

OUR FORGED, AGED AND OLD WORLD FINISHES ARE UNIQUE IN THE DEPTH, FREQUENCY AND TEXTURE OF THE DISTRESSED AREAS. BECAUSE OF THE CUSTOM HAND-FINISHED PROCESS, THE FINISH ON EACH DOOR WILL BE DIFFERENT. DISPLAYS AND COLOR SAMPLES MAY VARY FROM THE ACTUAL FINISH ON YOUR DOOR.

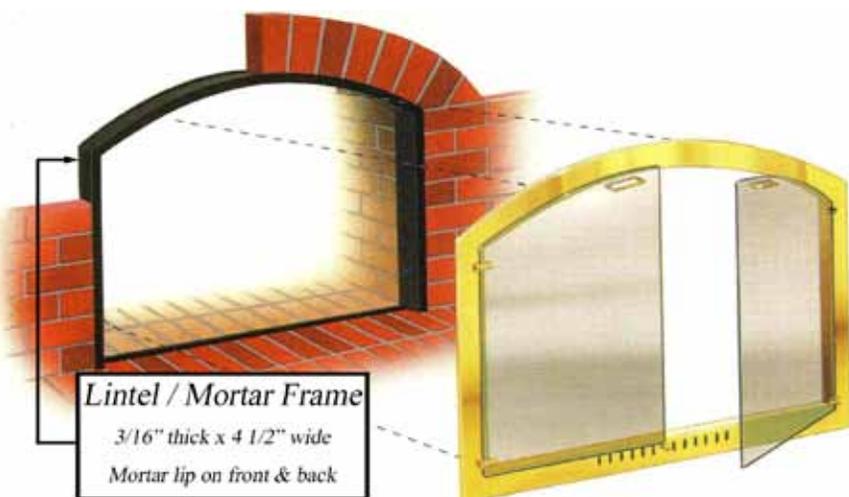

## FLANGES

FLANGES ARE WELDED PERPENDICULAR TO THE BACK OF THE MAIN FRAME AND ARE RECESSED INTO THE FIREPLACE OPENING. TOP & SIDE FLANGES ARE USED FOR MOUNTING ON INSIDE FIT ENCLOSURES OR TO HELP SEAL ROUGH OPENINGS. HEARTH FLANGES MAY BE USED TO SUPPORT AN ENCLOSURE WHEN THE OPENING IS RAISED ABOVE THE HEARTH.

## AIR SEAL

UPGRADE YOUR GLASS DOORS WITH STOLL'S AIR SEAL OPTION TO COMPLETELY SEAL YOUR FIREPLACE. THIS FEATURE ELIMINATES APPROXIMATELY 99% OF ENERGY LOSS INCURRED BY OPEN FIREPLACES. DOOR FRAMES ARE 1-1/2" WIDE AND ARE SEALED WITH GASKETING BETWEEN THE MAIN FRAME AND BETWEEN THE GLASS.

## LINTELS / MORTAR FRAMES

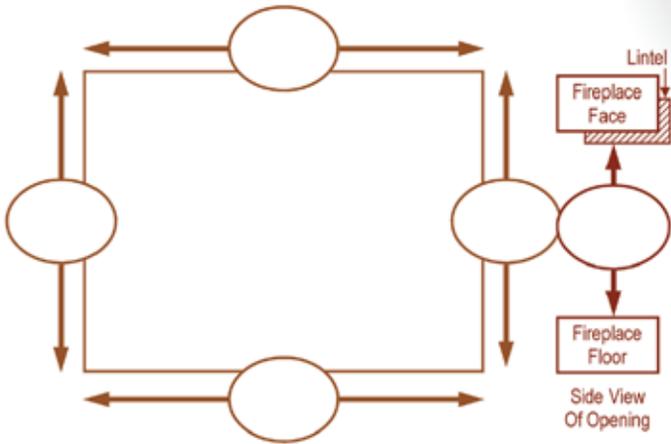

STOLL MORTAR FRAMES ARE THE PERFECT SOLUTION FOR MOUNTING A DOOR TO A ROUGH OR IRREGULAR FIREPLACE OPENING. THE MORTAR FRAME IS CUSTOM MADE TO FIT AND THEN MORTARED INTO THE FIREPLACE, PROVIDING A CONSISTENT MOUNTING SURFACE FOR THE NEW DOOR.

IN NEW CONSTRUCTION, STOLL LINTELS ENSURE A SYMMETRICAL FIREPLACE OPENING EVERY TIME. FIREPLACE CONSTRUCTION IS QUICKER AS THE OPENING IS COMPLETELY FRAMED, SUPPORTING THE MASONRY. STOLL LINTELS ARE AVAILABLE IN 6 STANDARD SIZES (2 RECTANGLE AND 4 ARCH.) STANDARD SIZED DOORS ARE AVAILABLE TO MOUNT DIRECTLY TO THE LINTEL SAVING TIME AND MONEY. CUSTOM LINTELS ARE ALSO AVAILABLE.

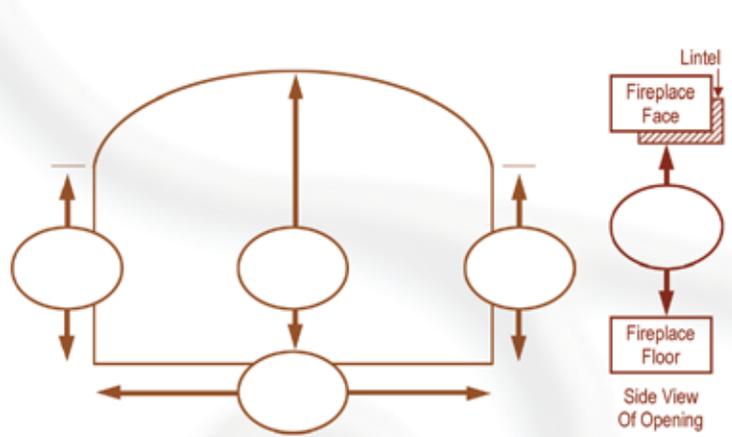

# MEASURING GUIDE

1. DECIDE WHETHER THE FIREPLACE ENCLOSURE WILL NEED TO BE OVERLAP MOUNT OR INSIDE FIT.
  - A. OVERLAP MOUNT: MOST BRICK, MARBLE, GRANITE, TILE OR ANY OTHER SMOOTH SURFACE FIREPLACE WILL ALLOW FOR A STANDARD OVERLAP MOUNT. IF AN OVERLAP MOUNT IS USED ON AN UNEVEN SURFACE, TWO STEPS ARE NEEDED TO INSURE A GOOD FIT.
    - A. ASK FOR MAX. OVERLAP. THIS WILL HELP COVER ANY GAPS CAUSED BY IRREGULAR STONE.
    - B. ASK FOR FLANGES. THESE WILL GO INSIDE THE OPENING AND WILL HELP TO SEAL GAPS. THESE FLANGES WILL ALSO GIVE THE INSTALLER SOMETHING TO PACK MORTAR OR INSULATION AGAINST.
  - B. INSIDE FIT: FIREPLACES THAT HAVE IRREGULAR FACING; LIKE FIELD STONE, RIVER ROCK, OR ANY OTHER UNEVEN SURFACE, MAY REQUIRE AN INSIDE FIT, IN WHICH THE FIREPLACE ENCLOSURE WILL BE MOUNTED INSIDE THE OPENING.
2. MEASURE THE FIREPLACE OPENING AND FILL IN THE CORRECT DIAGRAM BELOW. IMPORTANT: WHEN MEASURING THE HEIGHT, ALWAYS MAKE NOTE OF THE LOWEST AND HIGHEST POINTS.

RECTANGULAR OPENING:

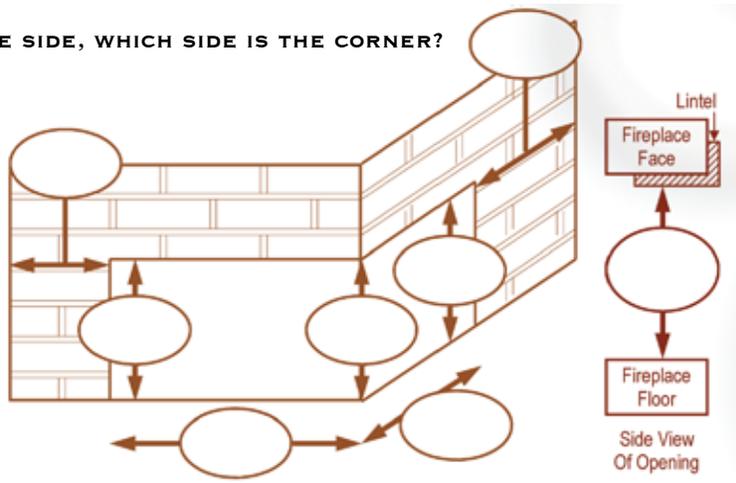

ARCH OPENING:

CORNER FIREPLACE:

FACING THE LARGE SIDE, WHICH SIDE IS THE CORNER?

- RIGHT  
 LEFT

3. IS THE LINTEL LOWER THAN THE FIREPLACE FACE?

- NO  
 YES - PLEASE SPECIFY DIFFERENCE: \_\_\_\_\_

4. IS THE HEARTH HIGHER OR LOWER THAN THE FIREPLACE FLOOR?

- SAME  
 HIGHER - PLEASE SPECIFY DIFFERENCE: \_\_\_\_\_  
 LOWER - PLEASE SPECIFY DIFFERENCE: \_\_\_\_\_

## Stoll's glass enclosure include these standard features:

- TRACKLESS DOOR DESIGN that allows glass doors to open 180 degrees, providing an unobstructed view of the fire and making cleaning easy.
- High quality MESH DOOR SPARK SCREENS with positive latch system keeps logs from rolling out onto hearth. These custom screens are especially sturdy because of an industry-leading "clamshell" design, with the tightly woven, heavy gauge wire mesh welded between two steel frames.
- 1/4" TEMPERED GLASS, HEAT RESISTANT powder coats, necessary MOUNTING HARDWARE and INSULATION are all a standard part of a Stoll door.
